Paws 4 A Cure

Thank you so much for your generous donation to Paisley. Without your donation, Paisley would not be able to receive the surgery that she needs for her back legs.

Paisley is a 13 month old intelligent, empathetic, goofy, people-orientated Labrador puppy who was recently diagnosed with Osteochondritis Dessicans, a bone growth disorder that sometimes occurs in Labradors and other large dog breeds. Our vet explained that the Osteochondritis Dessicans was caused by rapid growth when Paisley was a puppy. The bone disorder resulted in cartilage and bone fragments during growth that are now causing severe pain and lameness in Paisley's back legs. The only remedy for this disorder is an expensive surgery that I could not afford.

Paisley and I are so thankful that Paisley will now be able to receive the surgery that she needs to keep her back legs functioning due to your donations.

We cannot thank you enough!!

Rikkelle and Paisley
